FUJI Elevators

FUJI INDUSTRY (NINGBO) CO., LTD.

Up till now, we have won 94 patents (16 inventions, 45 utility models, 15 industrial design, 3 software copyright). And we have achieved ISO9001 Quality System certification and ISO10012-1 Measurement System Certification.

GREETING

FUJI INDUSTRY CO., LTD. is an international enterprise. Our company has been involved in the global industrial industry for more than 60 years and is committed to the development of core products and technologies of industrial fields.

Over the years, we have deepened our cooperation with global regions and have established branches or agents around the world to provide our customers with perfect products and efficient service.

With our pursuit of industrial innovation and accumulated experience for a long time, we have contributed our strength to the global industrial industry, deepened mutual cooperation among industrial chains, provided comprehensive technical guidance and support, and become a reliable enterprise for all customers in various fields.

The research and development of this technology is still representing the trend of future development of the elevator industry. Machines using this technology do not need excitation and have small starting currents but extremely high transmission efficiency and more reasonable structures. Compared with traditional traction machines, they have higher efficiency, lower noise, and better environmental and energy-saving performance. They significantly reduce the cost by saving up to more than 30% of energy.

Otani Notake
President

LONG HISTORY CRAFTSMAN SPIRIT AND INTELLIGENCE

Look back on the past, face up to the present, foresee the future. The outstanding performance of Fuji Industry elevator is derived from the integration of excellent inheritance and innovation and transformation.

In the long history of growth, Fuji Industry elevator firmly believes in the strong vitality of the craftsman spirit, inherits the spirit of craftsmanship, the concept of professionals and excellent skills in the Japan's Great Industrial Era, and it has created extraordinary masterpiece that present the quality of life.

At the same time, with continuous technological innovation, Fuji Industry elevator foresees market development, insights into the needs of life, and interprets the new generation model with high-tech aesthetics, performing well in the current and future intelligent era.

Driven by great wisdom, technology leads the future

As a leader in high-quality elevator services, Fuji Industry elevator, which is full of forward-looking thinking and responsible feelings, has begun a new evolutionary journey, to serve urban life with more humane, environmentally friendly and intelligent solutions, bringing high-class experience to society.

Fuji industry elevator not only has the leading automation equipment, but also complement efficiency and quality each other through advanced manufacturing platform.

Fuji industry elevator actively builds intelligent manufacturing integrating intelligence, safety and energy saving, introduces international advanced elevator technology and production technology, digital and scientific overall management, to realize lean production, so as to provide customers with high-quality building transportation solutions.

WORLD-CLASS, INDUSTRY-LEADING AND INTELLIGENT MANUFACTURING BASE

Automation • Digitization • Intelligence

**VARIOUS GUARANTEE
TO KEEP EASE
AND COMFORTABLE**

High performance host

The drag capacity and braking torque of new generation of permanent magnet synchronous gearless mainframe are better than the national standard requirements. Ensuring reliable operation of the elevator.

Intelligent light curtain protection

The high-beam light curtain system is sensitive, efficient, and accurate. It can automatically detect the fault location while ensuring personal safety, providing a basis for quickly solving the light curtain problem.

UCMP protection system

When the elevator is in the leveling position and the door is opened, if there is an accidental movement, the UCMP protection device will immediately start to make the elevator stop safely to prevent accidents.

32 bit DSP processor

The performance-upgraded control system adopts a high-performance 32-bit DSP processor, which has strong anti-interference ability to comprehensively improve the system's response speed and reliability.

Contactless and intelligent elevator-calling service

Users can book elevator-calling service in advance through the mobile APP, which not only saves waiting time, but also reduces indirect contact with other users and prevents cross-infection.

Management on intelligent recognition authority

Based on the information entered in advance, the system opens exclusive floor elevators to owners through face recognition and other methods. The elevators are used after identification is confirmed, which effectively improves the privacy and safety of residents.

Intelligent management system of building

The management system adopts IC card's intelligent identification system and establishes a big data system to accurately manage the travel safety of residents.

General elevator

Group control elevator

dispatching system Intelligent elevator

To solve the problem of efficient riding in crowded places, the intelligent group control elevator dispatching system is used to optimize the elevator operation mechanism, greatly shortening the waiting time and improving the operating efficiency of the buildings.

OPTIMIZE SPACE, AND INCREASE VALUE

Small machine room elevator High-efficient use with small space for free travel

- Make efficient use of space to improve building quality
- Simplify the installation process and shorten the installation
- Reasonably communicate design to reduce energy consumption

30%

High efficiency and 30%
energy saving

40+%

Machine room area
shrinks more than 40%

Machine roomless elevator Unlimited possibilities

- No need to set up a host machine room, which greatly saves construction costs
- Optimize the building space and provide more possibilities for architectural design
- No need to reserve complex holes, and the civil construction requirements are simpler

Small machine
room elevator

Machine roomless

VIEW THE SCENE IN 360 DEGREE

Style aesthetic design

The professional appearance and structure design team matches the architectural style of each space to create a pleasing ride experience.

Panoramic elevator

Panoramic elevator in Fuji Industry elevator company integrates aesthetics, taste and comfort, creating a landscape in the urban architectural with a panoramic design.

FRP structure cover

The use of high-precision glass fiber reinforced plastic materials makes the elevator beautiful in appearance, and integrated with the building and the surrounding environment, showing the compactness of the space and the transparency of the overall style.

Multi-angle landscape outside the elevator

With a smooth and comfortable ride and a variety of angles of landscape outside the elevator, it brings users a novel viewing experience.

There are a variety of car types for you to choose to meet your different needs.

The first choice for intelligent home elevators

With integrated high-end art design and cutting-edge intelligent technology, we always centers on you and your family, comprehensively improves the quality of home life and space taste, and customize your ideal home.

Intelligent APP application

The functions on self-developed APP management system of home elevator, such as light adjustment, smart elavator-calling service, operation data report, maintenance appointment, fault warning, can be completed through the mobile phone.

Diversified door opening customization

According to the installation position and convenience for use, the gate opening ways of home elevator can be divided into side-opened type, center-opening type and hand silding door for providing users with better experience.

Center-opening

Side-opening

Center-opening & double-folded

Through type

Right-angled door

Center-opening & side hung door

Automatic door

Manually operated door

Emergency and self-rescue system in power failure condition

when power outage or sudden failure occurs, the elevator self-rescue system allows the villa elevator to run to the leveling position at low speed so as to safely rescue passengers.

Cloud fault repair function

When a single problem occurs in the elevator, the Internet of Things platform will repair the problem remotely, which saves maintenance time and avoid disturbing the life of the owners.

HOME ELEVATOR CABIN CONFIGURATION

FUNCTION TABLE

Standard Function

All selective collective control	When the elevator travels, at the same time of responding the car command signal, it automatically responds up/down calling signal. The passenger at any floor can call the elevator through registering up/down calling signal.
Door-opening function	If you press "door-opening button" in operation panel, it can prolong door-opening time.
Inspection running operation	When entering inspection operation, the car comes into inching operation at low speed.
Direct parking	When the elevator decelerates according to distance principle, it does not crawl at all in leveling.
Slow self-rescue operation	When the elevator is under non-inspection condition and it does not park at leveling zone, it slowly and automatically runs to leveling zone, opens the door and releases the passengers.
Emergency rescue running	It sets "emergency electric running switch" to replace for manual jigger.
Locking service	Locking switch is installed in home landing calling box. After the switch acts, it only responds the car command. It then runs to home landing, opens the door for about 10 second, shuts the door and stops.
Automatic return to home landing	If the elevator does not have running command for certain period of time, it automatically returns to home landing and waits for the calling.
Automatic cut-off of fan, lighting in the car in waiting condition	If the elevator has no command/ calling register for over 5 minutes, it automatically cuts off fan, lighting in the car. At receiving the command/ calling signal, it starts again.
Setting of service floor	The system can flexibly shut/ activates certain/ multiple elevator service floor(s), parking floor(s) according to actual requirements.
Automatic correction of floor position signal	When the system runs, it will correct the position data in each terminal switch action-point and leveling switch action-point at each floor through self-tuning.
Dot-matrix floor display	Dot matrix display is available inside/ outside the car to instantly show the elevator running condition.
Special floor display	It can freely set "floor display characters". It is convenient for special requirements at site.
Automatic cancel in reversal operation	When the elevator runs to terminal landing or it changes the running direction, it will then cancel all the previously-registered reversal commands.
Protection to door opening/ closing trouble	When door opening/ closing times exceed set times, it still can not open/ close effectively, the system stops its operation and outputs the trouble.
Up-motion over-speed protection	When up speed of the elevator exceeds set value, rope gripper acts to stop the operation.
Down-motion over-speed protection	When down speed of the elevator exceeds set value, speed limiter and safety tongs act to stop the operation.
Door opening button	When the elevator stops at door zone, press "door opening button" in the car so that the closed/closing door opens again.
Door closing button to shut the door in advance	When the door opens, press "door closing button" can let the door immediately respond door-closing action and shut the door in advance.
Repeated door opening	If the elevator repeatedly closes for 15 second, and it still does not close effectively, it will then turn to opening condition.
Full-load by-pass	When the car is full of load, the elevator will not respond any passed calling signals. It only responds the command signal.
Overload protection	When the elevator load exceeds set value, the elevator rings to remind of overload. It opens the door and does not operate.

Standard Function

Emergency return operation at fire disaster	After "fire switch" acts, the elevator straightly travels to fire step, after it opens the door and releases the passengers, it then stops the operation.
Independent running	Through action switch, the elevator no longer responds any outer calling. It only responds the car command.
Reversal running protection	When the actual elevator running direction does not coincide with the command direction, it immediately makes emergency stop and alarms the trouble.
Anti-skid protection	When the continuous elevator operation exceeds the time stipulated by the limiter and leveling switch does not act, it then stops all the car running.
Trouble self-diagnosis	The controller can record 6 latest troubles so as to rapidly remove the trouble and restore the elevator running.
Alarm bell	In emergency case, press "alarm bell button" in the car, it rings the alarm bell on top of the elevator car.
Emergency lighting	In power failure, it automatically brightens emergency lamp in the car.
Five-party conversation device	Through intercom, people can talk amid the car, car-top, machine room, pit and duty-room.
Door light-curtain protection	When something hinders in the middle of 2 door leaves, light-curtain device in door zone acts to open the door.
Anti terminal over-travel protection	Up/ down terminal of the elevator installs terminal deceleration switch and terminal limit switch to ensure that it does not over-travel.
Protection against deceleration switch trouble	When deceleration switch is ineffective, the elevator makes emergency parking to prevent it from rushing to top/ bottom.
Protection against safety loop trouble	When the system receives safety loop trouble signal, it makes emergency stop. Under the troubled condition, it prevents from the elevator running.
Elevator cab prevents accidental movement	When the elevator is in the open state, if there is accidental movement, the elevator cab can present the movement.

Optional Function

Door-opening re-leveling	When the elevator door opens, if it makes inaccurate leveling due to weight etc., it will then automatically correct the leveling.
Fireman operation	When fireman switch acts, after the elevator runs to home landing; opens the door and releases the passengers, it is then for special use of firemen.
Operation of secondary operation panel	At the same time of having main operation panel, it can choose optional secondary operation panel. It is convenient for the use of the passengers.
Front-and-rear door operation	The elevator can simultaneously have front and rear doors for respective control. It is safe and convenient.
Linkage operation	When two elevators share outer calling signal, it automatically dispatches the calling response. It thus increases the running efficiency.
Group-supervision running	When multiple elevators (three to eight elevators) share outer calling signal, it automatically dispatches the calling response. It thus increases the running efficiency.
Counterweight signal compensation	The system can pre-output the torque which matches with the corresponding load to ensure the comfortable elevator travel.
Pre-torque setting	In automatic condition, the door keeps open without any command. And the lift immediately shuts the door and responds to the command if any.
Driver's operation	When the elevator car installs driver's control switch, after it acts, it can only be used for the driver's operation in the elevator car.
Car camera functions	The car installs camera to monitor the car conditions.

Customer Service Center

We have built a complete service system. During the entire life cycle of the project, professionals are responsible for communication, carefully listen to the customer needs, and provide the most intimate and refined services throughout the entire process. In use period, you will regularly check the operating status of your equipment to ensure the equipment is always in the best operating condition.

Intelligent IoT platform

Relying on the intelligent Internet of Things technology and the company's own maintenance big data, Fuji Industry Elevator independently develops an intelligent Internet of Things platform to bring unprecedented intelligent services to customers and passengers.

- 24/7 real-time online monitoring
- Highly transparent maintenance services
- Quick response to elevator failur
- Early warning and intervention mechanism of elevator

IIOT SERVICE PLATFORM • BUILDING OF DIGITAL EXPERIENCE
